Industria de Diseno Textil SA	3.57%	2.79%	Strong	● Outperformer
Amgen, Inc.	2.47%	4.53%	Strong	● Medium Performer
Bristol-Myers Squibb Co.	2.28%	3.85%	Strong	● Outperformer
Alibaba Group Holding Ltd.	2.14%	4.61%	Non-Reporting	● Laggard
Accenture plc	2.02%	4.27%	Strong	● Medium Performer
Total for Top 10	81.56%	30.99%		

■ Carbon Metrics 2 of 3

Emission Attribution Analysis

Emission Attribution Analysis examines the extent to which higher or lower GHG exposure between the portfolio and the benchmark can be attributed to sector allocation versus issuer selection. A portfolio with a larger amount of assets allocated to an emissions-intensive sector will ultimately have higher GHG emissions exposure. However, this can be offset by the selection of less emissions-intensive issuers from that sector. This analysis relates to the carbon footprint of the portfolio, specifically the Emissions Scope 1 & 2 (tCO₂e) and Relative Carbon Footprint (tCO₂e/Mio Invested) metrics.

The subsequent table identifies the most emissions-intensive issuers in the analysis, the comparative weight for each issuer between the portfolio and benchmark, as well as the sector allocation and issuer selection effects. A positive (green) number represents less greenhouse gas exposure for the issuer in the portfolio relative to the benchmark.

Top Sectors to Emission Attribution Exposure vs. Benchmark

Sector	Portfolio Weight	Benchmark Weight	Difference	Sector Allocation Effect	Issuer Selection Effect
Communication Services	10.78%	8.84%	1.94%	-0.17%	0.74%
Consumer Discretionary	17.43%	10.3%	7.13%	-2.11%	3.19%
Consumer Staples	5.99%	9.13%	-3.14%	0.96%	1.4%
Financials	13.6%	13.53%	0.07%	-0.01%	1.14%
Health Care	21.71%	14.66%	7.05%	-0.37%	0.79%
Industrials	5.25%	10.02%	-4.77%	3.2%	3.43%
Information Technology	25.24%	19.17%	6.07%	-0.36%	1.05%
Energy	0%	3.41%	-3.41%	19.09%	0%
Materials	0%	3.97%	-3.97%	25.13%	0%
Other	0%	0.11%	-0.11%	0.9%	0%
Real Estate	0%	3.15%	-3.15%	0.45%	0%
Utilities	0%	3.7%	-3.7%	37.91%	0%
Cumulative Higher (-) and Lower (+) Emission Exposure vs. Benchmark				84.61%	11.74%
Higher (-) / Lower (+) Net Emission Exposure vs. Benchmark				96%

Greenhouse Gas Emission Intensity

Top 10 Emission Intense Companies (tCO₂e Scope 1 & 2/Revenue Millions)

Issuer Name	Emission Intensity	Peer Group Avg Intensity
1. Taiwan Semiconductor Manufacturing Co., Ltd.	292.34	254.09
2. Yum China Holdings, Inc.	268.08	68.47
3. Tractor Supply Co.	39.64	16.12
4. The Walt Disney Company	37.10	23.28
5. HDFC Bank Ltd.	33.08	6.70
6. Unilever NV	30.57	47.73
7. Alibaba Group Holding Ltd.	28.33	51.82
8. Bristol-Myers Squibb Co.	19.14	104.31
9. Industria de Diseno Textil SA	19.03	22.01
10. Games Workshop Group plc	17.97	16.94

■ Climate Scenario Analysis 1 of 2

In order to transition, holdings need to commit to align with the international climate goals and progress on those in the future. Currently, 20.11% of the portfolio's value is committed to such a goal. While this is not a guarantee to reach this goal, the currently 14.84% of the portfolio without a goal is certainly unlikely to transition and should receive special attention from a climate risk conscious investor.

Portfolio Compliance with Emission Budget per Scenario				
	2020	2030	2040	2050
2°	24.91%	34.13%	40.25%	48.02%
4°	23.13%	23.93%	24.34%	24.87%
6°	21.98%	20.34%	19.28%	18.78%

The strategy in its current state is aligned with a 2 degree scenario for the full analyzed period (until 2050).

Climate Strategy Assessment (% Portfolio Weight)

Scenario Analysis

The climate scenario environment alignment compares current and future portfolio greenhouse gas emissions with the carbon budgets for a below 2 degree Celsius scenario as well as warming scenarios of 4 degrees and 6 degrees Celsius until 2050.

The CI Global strategy in its current state is aligned with a 2 degree scenario for the full analyzed period (until 2050).

Portfolio Emission Pathway vs. Climate Scenarios

■ Climate Scenario Analysis 2 of 2

To contain average global warming to below 2 degrees Celsius, portfolio holdings in certain sectors are still aligned (-), while others are already beyond (+) the emission budget for a 2 degrees Celsius pathway.

Portfolio Emissions vs. Emission Budget per Sector - Under (-)/Outperformance (+) of the 2°C Scenario Requirements

Sector Emissions vs. 2°C Emission Budget for 2020

Sector Emissions vs. 2°C Emission Budget for 2050

Percentage of Holdings 2°C Aligned in 2020, 2030, and 2050

■ Physical Climate Risk Analysis

Rising temperature levels, even if limited to 2° Celsius, will result in changes of the climate system resulting in physical risks. Physical risks can be classified into long term weather changes and extreme weather events such as storms, floods, or droughts. Companies’ exposure to these two types of physical risk depends on two main factors: their sector as well as the geographical region they are active in.

Sector Exposure: Chronic and Acute Physical Risk

Percent of Holdings Directly Exposed to Geographic & Associated Sector Risk

■ Transition Climate Risk Analysis 1 of 3

A decarbonized world needs to address both the demand side (for example Utilities burning fossil fuels) and the supply side (i.e. fossil reserves) of future emissions. For Utilities, it matters whether the power generated and power generation planned for the future stem from renewable (green) or fossil (brown) sources. For fossil reserve owning companies, potential future greenhouse gas emissions might indicate stranded asset risk. The Carbon Risk Rating (1-100) provides a view on how well the respective portfolio and benchmark holdings are managing such risks.

Transition Analysis Overview

	Power Generation		Reserves		Climate Performance
	% Installed Capacity Green Share	% Installed Capacity Brown Share	% Investment Exposed to Fossil Fuels	Total Potential Future Emissions (ktCO ₂)	Weighted Avg Carbon Risk Rating
Portfolio	-	-	-	-	40
Benchmark	14.47%	61.76%	5%	218.52	37

Power Generation

Power Generation Exposure
(Portfolio vs. Benchmark vs. Climate Target)

For a decarbonized future economy, it is key to transition the energy generation mix from fossil to renewable sources. Utilities relying on fossil power production without a substitute plan might run a higher risk of getting hit by climate change regulatory measures as well as reputational damages. The graph on the left compares the energy generation mix of the portfolio with the benchmark and a 2 degree Celsius compatible mix in 2020 and 2050, according to the International Energy Agency. Below, the 5 largest Utility holdings can be compared on fossil versus renewable energy production capacity, their contribution to the overall portfolio greenhouse gas emission exposure and their production efficiency for 1 GWh of electricity.

■ Fossil Fuels ■ Nuclear ■ Renewables ■ Other

Top 5 Utilities' Fossil vs. Renewable Energy Mix

Issuer Name	% Fossil Fuel Capacity	% Renewable Energy Capacity	% Contribution to Portfolio Emissions	Emissions tCO ₂ e Scope 1 & 2 /GWh
-	-	-	-	-

■ Transition Climate Risk Analysis 2 of 3

For fossil reserve owning companies, potential future greenhouse gas emissions might indicate stranded asset risk, as about 80% of those reserves need to stay in the ground to not exceed 2 degrees Celsius of warming. The portfolio contains 0 tCO₂ of potential future emissions, of which - stem from Coal reserves, - from Oil and Gas reserves. Investor focus is often on the 100 largest Oil & Gas and 100 largest Coal reserve owning companies, to understand the exposure to these top 100 lists.

Exposure to the 100 Largest Oil & Gas and Coal Reserve Owning Assets

Issuer Name	Contribution to Portfolio Potential Future Emissions	Oil & Gas Top 100 Rank	Coal Top 100 Rank
No Applicable Data			

Unconventional and controversial energy extraction such as "Fracking" and Arctic Drilling is a key focus for investors, both from a transition and a reputation risk perspective.

Exposure to Controversial Business Practices

Issuer Name	Portfolio Weight	Arctic Drilling	Hydraulic Fracturing	Oil Sands	Shale Oil and/or Gas
No Applicable Data					

■ Transition Climate Risk Analysis 3 of 3

Portfolio Carbon Risk Rating

The Carbon Risk Rating (CRR) assesses how an issuer is exposed to climate risks and opportunities, and whether these are managed in a way to seize opportunities, and to avoid or mitigate risks. It provides investors with critical insights into how issuers are prepared for a transition to a low carbon economy and is a central instrument for the forward-looking analysis of carbon-related risks at portfolio and issuer level.

CRR Distribution Portfolio vs. Benchmark

Avg Portfolio CRR and Spread for Selected ISS ESG Rating Industries

ISS ESG Rating Industry ¹	Average Carbon Risk Rating		
Food & Beverages			34
Financials/Commercial Banks & Capital Markets			23
Renewable Energy (Operation) & Energy Efficiency Equipment			-
Utilities/Electric Utilities			-
Electronic Components			-
Machinery			-
